Category:Books about India Category:Books about the United KingdomQ: Is there a function to convert a variable name to another in python? I have variables like this in a python script. a = b/c I need to change a and b to a new variable (I think this is a function). I think what I need is like this function. function(a, b, c) How can I find the function that I want? A: The shortest and most elegant way to do this is: def a(b, c): return b / c a(a, b, c) There are also various ways to get a similar syntax, like using dictionary unpacking: function(**{a: b, b: c}) You can also use the following decorator: def make_a(name, b, c): return b / c @make_a('a', b, c) I personally find this last one more elegant, but it seems to depend on the programming philosophy of the developers. Q: How to install PowerApps in my local MSDN environment Can someone help me in installing Power Apps in my local MSDN environment, I am not able to see the PowerApp controls in my app and also I am not able to add new app.. it seems that it is for the enterprise only...any help would be appreciated... A: There are ways of getting ready-to-run experience for your PowerApps. Check out the links that were mentioned in the comments. Install the Desktop Experience standalone version of PowerApps (and nothing else) - Install a server version (which includes the component that the Desktop Experience was built from) - Both of these cases are covered in a previous SO answer: How to use the Power Apps Desktop Experience 1. Field of the Invention The present invention relates to a carriage head which is formed as a heavy-duty corkscrew. 2. Description of the Related Art An example of this type of carriage head is a conventional carriage head which is formed as f678ea9f9e
